PL140N - PL140NP	<b>26</b>
PL200N - PL200NP	<b>28</b>

## BOWL ELEVATORS

HELP80	<b>30</b>
HELP100	<b>30</b>
HELP120	<b>30</b>
HELP140	<b>30</b>
HELP200N	<b>30</b>

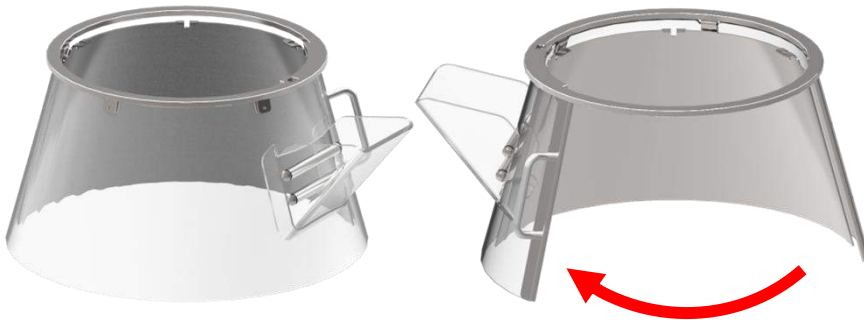

## IMPORTANT: NEW EUROPEAN STANDARD FOR SAFETY GUARDS ON PLANETARY MIXERS

The new EN454 European Standard introduced a new update as regards the guards on planetary mixers. The new standard obliges planetary mixers manufacturers to launch on the market machines with closed guards so as to limit the release of dust and to make cleaning operations easier.

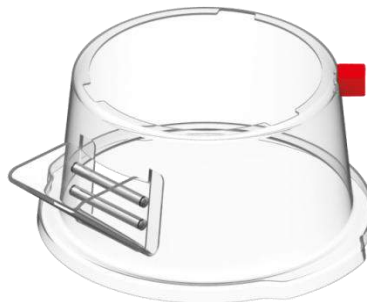

An opening for ingredient addition is nevertheless foreseen.

Our company has decided to conform to the above standard and has foreseen two different types of guards:

- 1- Fixed rotating plastic safety guard (**F**), with a suitable funnel for ingredient addition

- 2- Removable plastic safety guard (**R**), with a suitable funnel for ingredient addition and one coded sensor that interrupts the machine's work cycle as soon as it is removed from its safe position

We can still supply machines with stainless steel grid safety guard (**G**), but **only to non-EU countries** and to European clients who declare in writing that the final destination of the machine is a country outside the EU. In such cases (**G**), of course, the machine **WILL NOT HAVE THE CE MARKING**.

For future orders we ask you to kindly specify the type of safety guard you require: fixed rotating plastic safety guard (**F**), removable plastic safety guard (**R**), stainless steel grid safety guard (**G**).

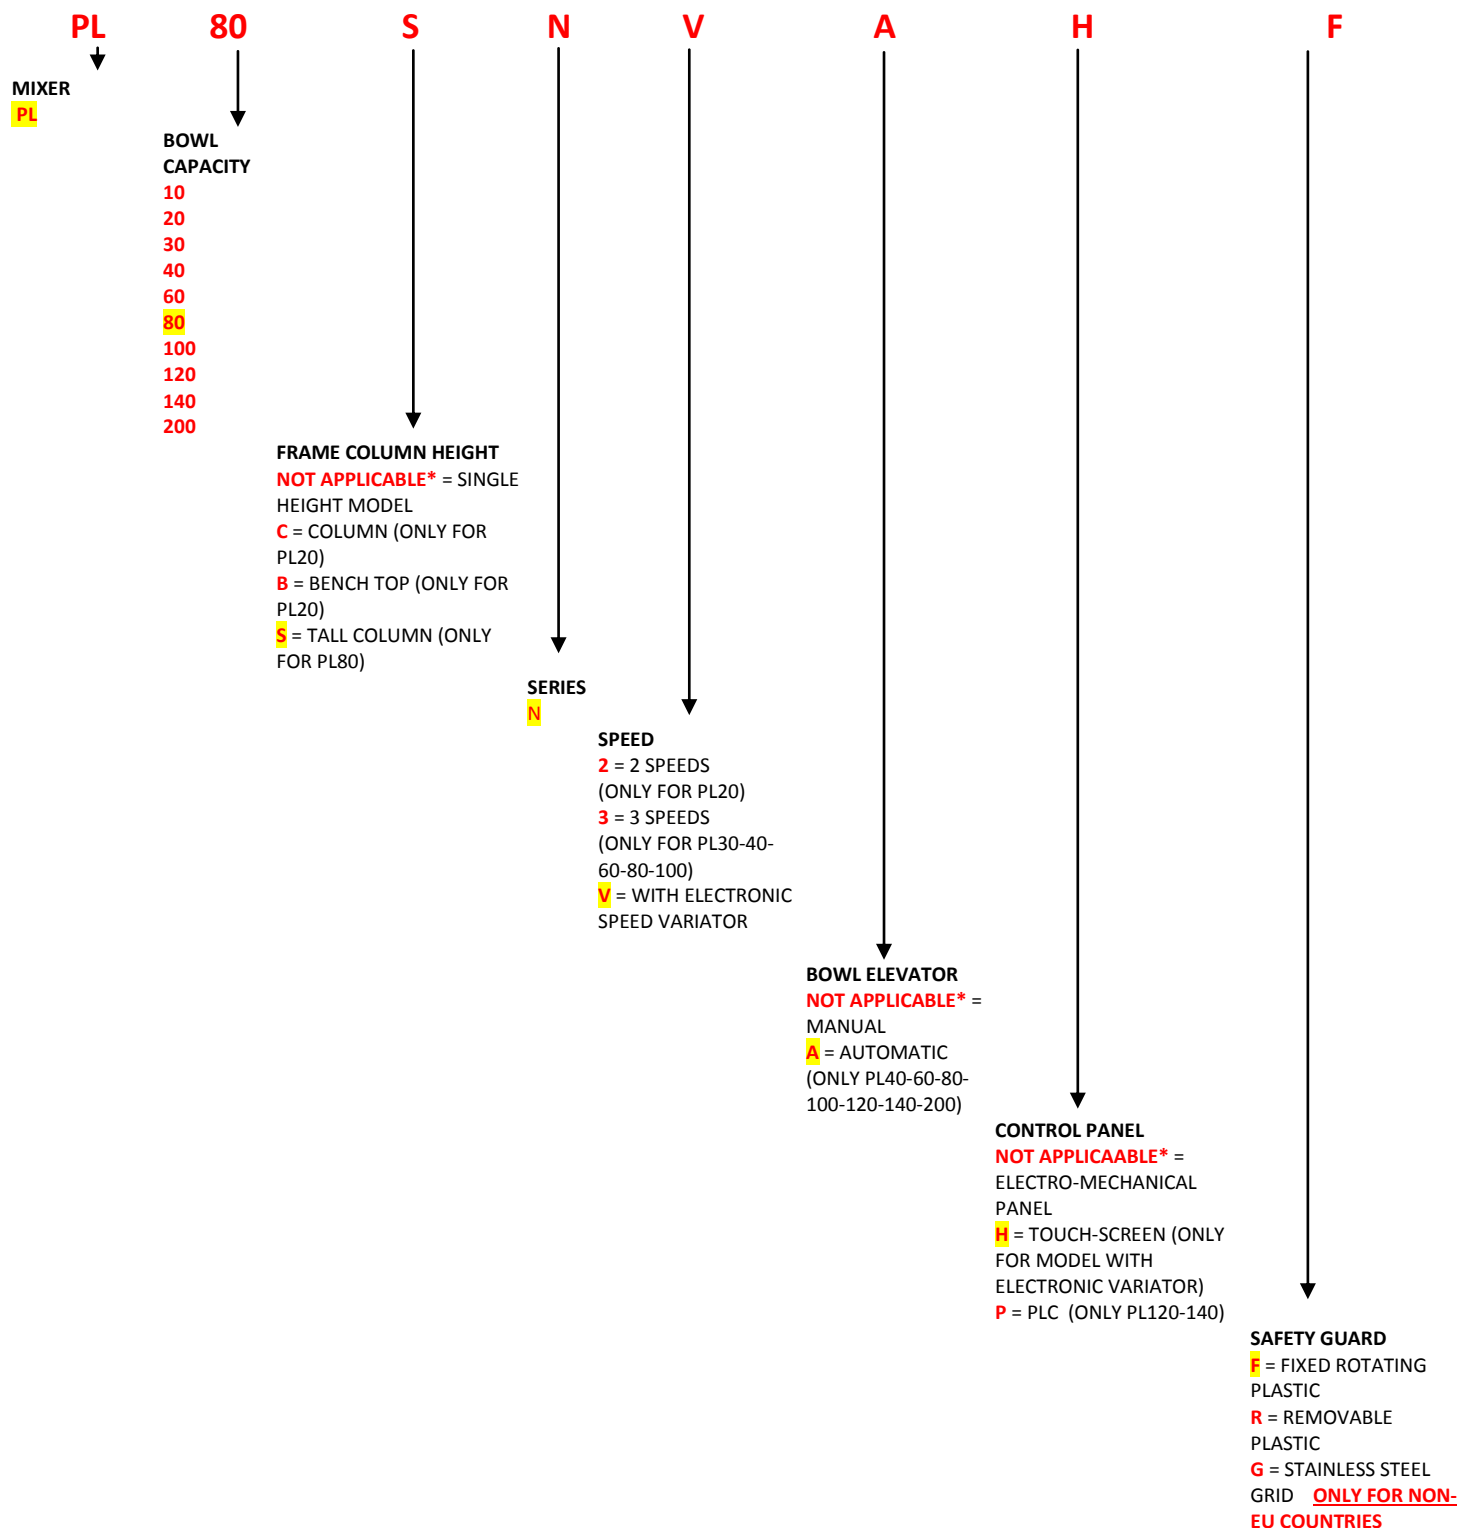

**Should you fail to indicate in your purchasing order the type of safety guard required, we will supply a standard fixed rotating plastic safety guard (F).**

The different codes and prices are illustrated in the following pages.

## MACHINE CODES

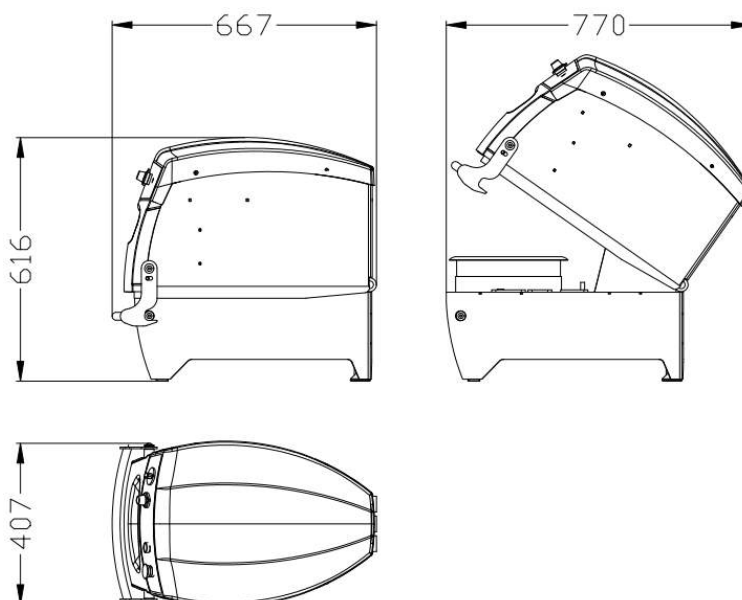

Read the example and diagram illustrated hereafter to better understand the new machine codes.

Explanation of the **PL80SNVAHF** machine code: planetary mixer (**PL**), bowl capacity 80 litres (**80**), with tall column (**S**), series (**N**), with speed variator (**V**), with automatic bowl elevator (**A**), with touch panel (**H**), with fixed rotating plastic safety guard (**F**).

**\*NOT APPLICABLE** = this means that for machines featuring one single frame column height, and/or manual bowl elevator, and/or electro-mechanical control panel no letter is required in the machine code to specify such item
